Tom,

Should the Fermi Surfaces stir, the SGT should discuss them. Prior to such an eventuality, I noticed (a) over the tree behind Broadway Lumber on Northern Blvd. They were quite large.

1:05 AM — Out for a walk on the beach: A small disturbance on the snow in front of the Teich's: A pinpoint of light on the white boards of the Teich's: (0⁰⁰): (0⁰): (0) in light blue.

5:35 AM — Two rolls of film (↑) (↑) rising in those directions: A razor thin light trace on the tree behind Sheridan's tree: (P₀), (P) in black, (•) in mustard: (P²) in near UV.

I'll leave the analysis to the SGT.
