Tom,

Should the PFDmi Surfaces Stir, the Sgt should discuss them. Prior to such an eventuality, I noticed two spheres move horizontally in the air in the White Castle. They may have represented two more planets that have to be moved.

1:00 AM — An amateur repairing a telephone installation. : A house with cartons, etc strewn all over the floor. : Some people at banquets. : Some generals on a U.S. battleship.

1:10 AM — ($\rightarrow 0$) on the tree in front of the Teisen's. : (σ), (0) in near UV. : (III^0): (II): (I^4), (I) in electric blue.

1:50 AM — (III) left in red, right in blue. : (β) resembling a slide ear in light green. : (S) resembling an iris lens, the problem they made a video of at a "leaderless group" management development session.

2:25 AM — A sense of a walk. : A small disturbance on the radio speaker. (\odot), (0) in electric blue.

3:20 AM — A group of sailboats.

5:30 AM — Running narcotics in the Caribbean. : Going down a hill in a worn out Austin Healey. : Trying to decide if any blue suit needed cleaning.

6:15 AM — A blue car travelling very fast. Behind it was a vertical sparkle.

I'll leave the analysis to the Sgt.
