DM

Tom,

THE SGT SHOULD CONSIDER THE FOLLOWING STARS:

- (>>>>>>>) : () : () IN LIGHT GREEN : () IN LIGHT GREEN : () IN NEAR UV, RESEMBLING THE PATTERN OF AUTO-MOBILE HEADLIGHTS : ().

I TAKE IT FROM THIS THAT THE PROJECT DRIVE PROBLEM STILL HASN'T BEEN SOLVED. I MIGHT SPECULATE ON THE INTERPRETATION OF THE STARS:

- (>>>>>) : () : () AS SUGGESTING THAT SIMPLY WORKING WITH INTEGRALS TO DEVISE CLASSES OF SPACE IS INSUFFICIENT.

I WOULD USE THE FOLLOWING EXAMPLE AS A BASIS FOR AN ARGUMENT:

- BRIT, Pg 508 - ZONAL HARMONICS - $\partial/\partial h_1$, $\partial/\partial h_2$, ... $\partial/\partial h_n$ OF $1/r$ IN WHICH $h_1, h_2 \cdots h_n$ ARE n DIRECTIONS IN SPACE, AND $\partial/\partial h$ DENOTES DIFFERENTIATION IN DIRECTION h.

AND ADVANCE THE HYPOTHESIS:

- ORIENTED PARTIAL DIFFERENTIALS AND PARTIAL DIFFERENTIALS WITH LIMITS ARE A VITAL COMPONENT IN THE METHODOLOGY NECESSARY TO DEVELOP THE THEORY TO THE NEXT LEVEL BY DEVELOPING THE SUB AND SUPERHARMONIC PROPERTIES OF FILAMENTS.

YOU MAY WANT TO EVALUATE THIS.
